

Unipart Technology Logistics

Environmental Policy

Unipart Technology Logistics is committed to providing logistics, repair, installations, customer service and other client services in an environmentally responsible manner. The organisation will maintain an Environmental Management System consistent with BS EN ISO 14001: 2004 at our Nuneaton and Rugby sites.

We feel strongly that we have responsibility for the environment of our employees, local community, customers and contractors, and for minimising the ways in which we affect the wider environment beyond our site. In line with our Corporate Social Responsibility Policy we aim to improve our local environment by donating the time and commitment of our employees.

We will, as a matter of course, comply with legislation and other requirements to which these sites subscribe. In addition, our most significant environmental aspects and impacts will be monitored and, wherever practicable, reduced. We are committed to the prevention of pollution. At least once a year we will review our environmental performance and set challenging objectives and targets to ensure continuous improvement.

Specifically, we will:

- Comply with the Unipart Group of Companies (UGC) Environmental Policy.
- Control the risk of accidental pollution on site.
- Manage site waste storage and disposal in a responsible way.
- Ensure all employees are trained to understand and manage the ways in which their activities have an impact on the environment.
